DaProSystems Awarded Contract to Supply Crime Analysis Software

DaProSystems Awarded Contract from King George County Sheriff's Office to Supply Crime Analysis Software

The King George County Sheriff's Office continues its investment in its local systems with the purchase of DaProSystems WebCAT™ Crime Analysis Software.

Roanoke, VA – August 30, 2006 - DaProSystems, Inc., a leader in Public Safety Software and Professional Services, announced today that it has been awarded a contract from the King George County Sheriff's Office to supply its WebCAT™ Crime Analysis Software system and related professional services.

The King George County Sheriff's Office has been a client of DaProSystems for several years and is in the process of rolling out a Mobile Data System project also supplied by DaProSystems. The agency's newest purchase of Crime Analysis software will enable the agency to better evaluate law enforcement and public safety data to identify trends, improve resource allocation and improve agency effectiveness.

DaProSystems WebCAT™ Crime Analysis System is a Global Justice XML (GJXML) compliant software package that enables seamless data integration with Public Safety Agency databases including CAD and RMS. The system enables spatial and temporal data analysis with query results available for display in multiple formats including Graphs, Charts, Reports and GIS-based Maps.

According to Captain Steve Dempsey of the King George County Sheriff's Office, "The Crime Analysis package offered by DaProSystems offers total integration with our existing systems and gives us the capability to analyze the tremendous amount of information we collect each day. An added benefit is the ability to scrutinize not only Law Enforcement data but also Public Safety information; this system will not only bring value to the Sheriff's Office but also to Fire, Rescue, Emergency Management and Communications personnel."

"King George County is the latest in a growing number of DaProSystems' Public Safety clients to deploy Crime Analysis software to expand the functionality of their existing systems. The ability to quickly and effectively query, analyze, and disseminate the vast array of collected data elements is a key issue in today's Public Safety agency environment. With WebCAT™, DaProSystems is affirming its commitment to serving the Public Safety community by delivering capable systems at pricing a local budget can afford." said Jeff Lewis, DaProSystems' Manager of Sales & Marketing.
